Stem cells in the adult heart | Kristina Vukušić

Stem cells in the adult heart

- 3D culture, isolation of Side Population cells and search for a stem cell niche

Kristina Vukušić

Kristina Vukušić graduated as a Biomedical Scientist from University of Gothenburg in 2001. She has worked on autologous cartilage transplantation in a GMP lab, at Sahlgrenska University Hospital, as well as research projects within the embryonic-, cartilage- and limbal stem cell fields. She is currently pursuing research on cardiac regeneration.
