

Karin Rystedt graduated from the medical school at the Karolinska Institute in Stockholm, 2006. She is a specialist in Family Medicine and is currently working as a general practitioner in primary health care. Her PhD thesis includes a randomized controlled, non-inferiority trial of 5 versus 10 days of treatment with penicillin V for pharyngotonsillitis with group A streptococci; rapid antigen detection test and throat culture in patients after recent penicillin V treatment for pharyngotonsillitis; side-effects from penicillin V treatment, including antimicrobial resistance in the faecal microbiota; and C-reactive protein in primary care patients with influenza-like illness.
