

# Pathogenic mechanisms affecting mitochondrial DNA replication and transcription

Mutations that cause defects in OXPHOS system biogenesis and other aspects of mitochondrial function, such as disturbing the nucleotide pool, could lead to mitochondrial diseases. Therefore, we have tried to characterize the pathogenic mechanisms affecting mitochondrial DNA replication and transcription in this thesis.

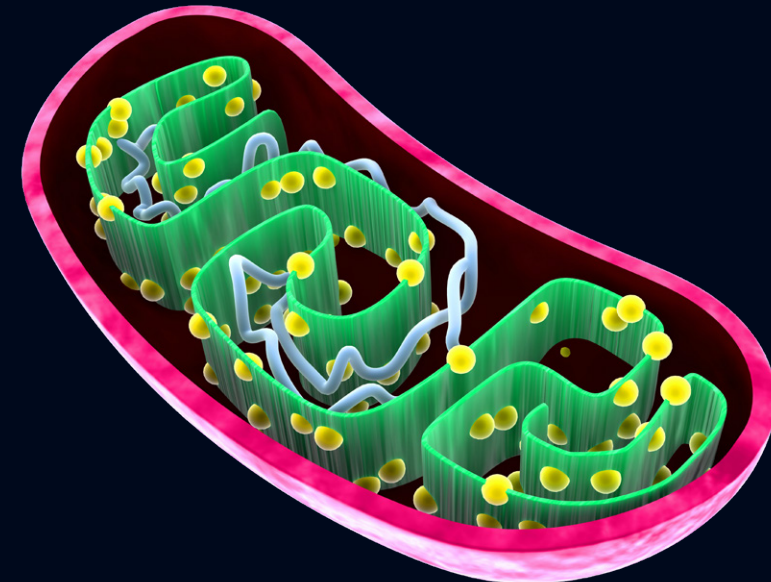

Meenakshi Singh studied her Bachelor's and Master's degrees in Biotechnology. Before joining Prof. Claes Gustafsson's group for her doctoral studies, she carried Pre-PhD research in the field of neuroscience at All India Institute of Medical Sciences, New Delhi, and Institute of Genomics and Integrative Biology (IGIB-CSIR). Further moving ahead in her career, she joined the CMB Dept at the University of Gothenburg and worked on the development of follicles in mice ovaries. Later she pursued her PhD from the Dept. of Medical Biochemistry and Cell Biology at the Sahlgrenska Academy, University of Gothenburg, Sweden.
