Long-term impacts of sulfur mustard exposure on mental health, quality of life, and lung function | Faraidoun Moradi

Faraidoun Moradi holds a medical degree from the University of Gothenburg and is a licensed pharmacist from the University of Uppsala. He currently works at the primary health care in Gothenburg as a specialist in Family Medicine. Through his Ph.D. research, he employs both qualitative and quantitative approaches to explore the long-term consequences of sulfur mustard exposure. His focus lies in examining the firsthand experiences, mental health, quality of life, and respiratory function of sulfur mustard exposed individuals in Kurdistan-Iraq and Sweden.
